ELEMENTARY CHINESE!

Time allowed - Two hours

ATTEMPT ALL QUESTIONS:

Translate into English: (30 marks)

凡属散党通他升应的人。我對於他便有了 责任·凡局我應當做的事·而且力量能够做得到 的。我们於追件事便有了责任。有了责任。那良公 便時時則到監督在後頭,一日應盡的責任没有 查.利夜裡便是過的痛苦日子。一生核盡的责任没 有者,使死也是带着痛苦往喷蒸捏去。 翻過來看 甚麼事是最快樂的呢!自然責任完了 算是人生第一架事。 大城天下事徒苦中将不的樂、燒算真樂、人生 顶知道有负责任的苦虑,才能知道有意量任的偿

Translate into Chinese: (30 marks)

Mother arrived in Paris almost without money. As a matter of ... sentiment, and perhaps as insurance against complete poverty, she still retained the diamond-set watch my father had given her. Other than this she had only 15 dollars in cash. Her situation was quite desperate. The lessons she had planned to take were out of the question; her problem then was simply how to earn a living.

my me one or the first week it was apparent that she would get along in France. Concerts, an occasional recital, singing engagements in churches and social evenings would provide some income. Being an accomplished needlewoman she did dressmaking as a sideline. Her kindergarten experience also proved of priceless value in helping her friend to start a kindegarten. So she settled into a round of work and study that filled her every moment: kindergarten in the morning, music lessons and practice in the atternoon, singing engagements (when she could get them) in the evening, with sewing sandwiched in whenever possible.

Write a short composition on one of the following subjects (about 150 words in the literary style or about 200 words in Kuo Yu): (40 marks)

# 英中會考物理科試題

Time allowed - Two hours and thirty minutes

日二初月四年午丙曆夏

Answer FIVE questions, choosing at least ONE from each section. Mathematical Tables will be supplied. Graph Paper will be supplied on request,

# SECTION A

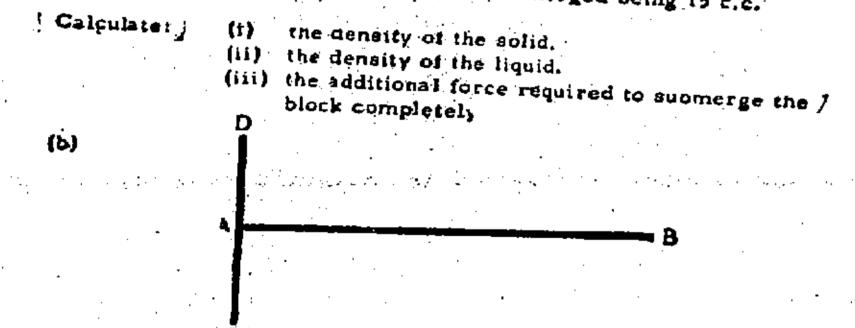

- (a) A cargo aircraft is due to leave Airport A at 10.00 hrs and to arrive at Airport B at 11,00 hrs. Airport B is situated 200 miles from Airport A in the direction 28° East of North. The wind is blowing at a speed of 50 m. p. h. from
  - In what direction must the aircraft fly to reach Airport B. At what average speed must the aircraft travel to arrive at Airport B at the estimated time.

Solve by use of a clearly labelled vector diagram drawn to a scale of 2" = 100 m. p. h. and explain your construction.

(b) A car starts from rest and accelerates uniformly at the rate of 6 ft. per sec. per sec. for 10 seconds. It then travels at a constant speed for 30 seconds after which the brakes of the car are applied and the car comes to rest decelerating uniformly in 8 seconds.

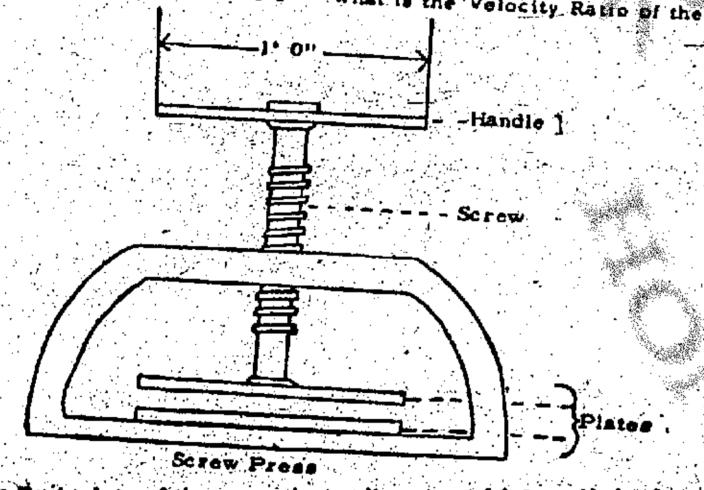

# Draw a Velocity-Time Graph and from this determine:-

- the maximum speed reached in m.p.h.
- the total distance covered, indicating how this is found from the
- (i) Quote two examples in which friction is helpful in producing motion. (ii) A rectangular block of wood on an inclined plane is on the point of sliding down the plane. Draw a clearly labelled diagram showing the forces acting on the block.
  - (iii) If the coefficient of friction is  $\frac{1}{2}$ , what is the angle of inclination of the plane to the horizontal?
- (a) A block has a mass of 24 gms, and a volume of 20 c.c. When placed in a liquid the block floats, the volume submerged being 15 c.c.

AB and CD are two flat rigid strips of metal of negligible thickness and uniform width AB is twice the length of CD and the two strips are fixed together at rish ngles so that CA = AD.

- Calculater
- (i) the position of the centre of gravity of the flours se formed (diagram above).
- the angle in degrees of AB to the vertical when the figure is suspended from the point C.
- (i) The handle or a screw press is I ft. long from end to end and the erray has 12 threads to I'' What is the Velocity Ratro of the press ?

(ii) Each plate of the press has a diameter of 1 ft. and the force applied to each end of the handle is 20 lb. wt.

Assuming an efficiency of 40 per cent, what will be the pressure exerted by the plates in lb. wt. /sq. inch? 4 = 22)

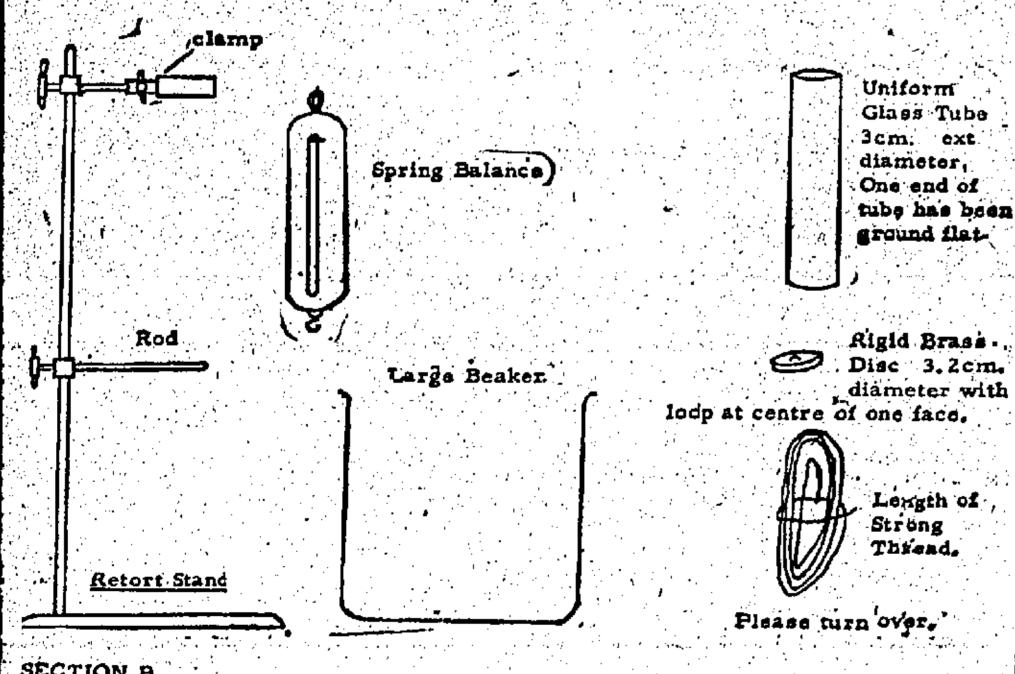

(a) Draw a labelled diagram or a hydraulic (Bramah) press showing how an object, such as a bale of cotton, can be compressed.

(b) The larger cylindrical piston (ram) of a hydraulic press has a diameter of I ft. and the smaller piston (plunger) a diameter of 2 in.

- the upward thrust of the ram when a force of
  - 100 lb. wt. is applied to the plunger.
- the distance moved by the ram when the plunger

(c) The apparatus shown can be used, when assembled, to perform an experiment to show the variation of pressure with depth in a liquid.

Draw a diagram to show how you would assemble the apparatus and describe fully how you would use it to perform such an experiment,

# SECTION B

- (a) State clearly what you understand by "the coefficient of apparent expansion
- (b) Describe fully an experiment to determine the coefficient of apparent expansion of a non-volatile liquid.
- uraw a labelled diagram of the apparatus you would employ
- Using symbols instead or accusi values, give the readings which must be taken and showshow the result can be deduced from these readings.
- (c) Express mathematically poyle's Law and Charles' Law, writing a deparate equation for exch. Indicate the meaning of the symbols used. State the conditions under which each law holds.
- Show how the full gas equation " K. for a fixed mass of gas, can be deduced from these .wo laws.

I (a) Explain the differences between evaporation and boiling.

- (i) Give two definitions of Relative Humidity. (ii) What do you understand by the Dew Point?
- (c) Draw a labelled diagram of the apparatus you would require to determine the Relative Humidity of a room and describe how you would make the necessary measurements.

Temp (\*G1 - 15 · 16 · 17 V-P (mm.) 9,8 10 5 11.2 12.0 12.8 13.6 14.5 15.5 16.5 17.5

The table given above is an extract from a table showing the approximate Vapour Pressure of Water over a range of temperatures. If the temperature of a room to 18 °C and the Dew Point is 14 °C, what is the Relative Humidity of the atmosphere of the room?

(e) Water is introduced, drop by drop, into the space above the mercury in a mercury barometer tube until a thin film of liquid is formed and remains on the surface of the mercury Explain clearly what hannens during this procedure

What will happen if the barometer tube is heated in a steam jacket if sufficient water remains in the barometer tube to maintain throughout a film of liquid on the surface of the mercury even at 100 °C?

# SECTION C

- .(a) When the stem of a vibrating tuning fork is pressed against a table, the sound can be heard very clearly. The length of time during which the sound can be heard would be longer if the vibrating fork were not pressed against the table. Explain these facts.
  - What is the relationship between the frequency of vibration of a stretched wire and:
    - the length of the wire.

the tension in the wire.

(c) Describe fully an experiment you would perform to show the relationship referred to in (b)(i)

(d) A and B are two observers one kilometre apart. There is a steady wind blowing. When a gun is fired by A, the time interval between the flash and the report observed by B is 3.04 sec. When a gun is fired by B, the interval between the flash and the report observed by A is 2.96 sec. Calculate the velocity of sound in air and the velocity component of the wind in the direction

(a) A thin convex lens of focal length 17.5 mm. and fitted with a stop (diaphragm) which reduces its aperture to 12 mm. is placed with its principal axis horizontal. A point source of light P is placed 5 mm. above the principal axis and 10 mm. from the central plane of the lens.

my means of a ray diagram (Grawn to a scale of 1 in. \$ 1 cm. ) find:-

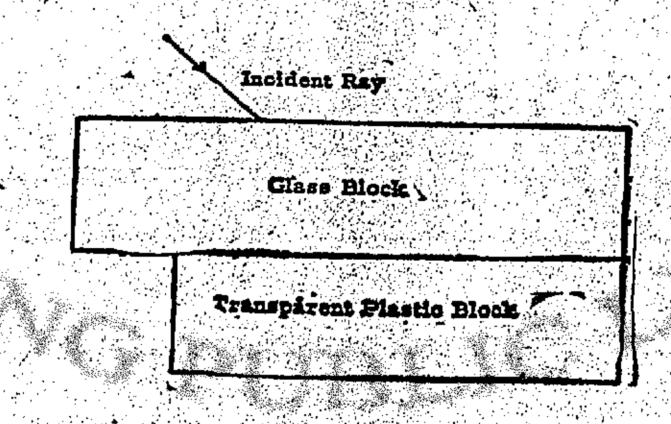

- the position of the image of P. (ii) the height of the patch of light which is formed on a vertical screen placed 20 mm. from the lens and on the side opposite to P.
- Give the lens equation and state what each letter represents. State clearly what eigh convention you would use an applying

bis to the lens equation, check your answer to (a)(i). (c) Draw an experimental arrangement designed to produce, on a screen, a pure spectrum from a narrow slit source of white light-

Explain why this spectrum is composed of a series of images of the source in different colours.

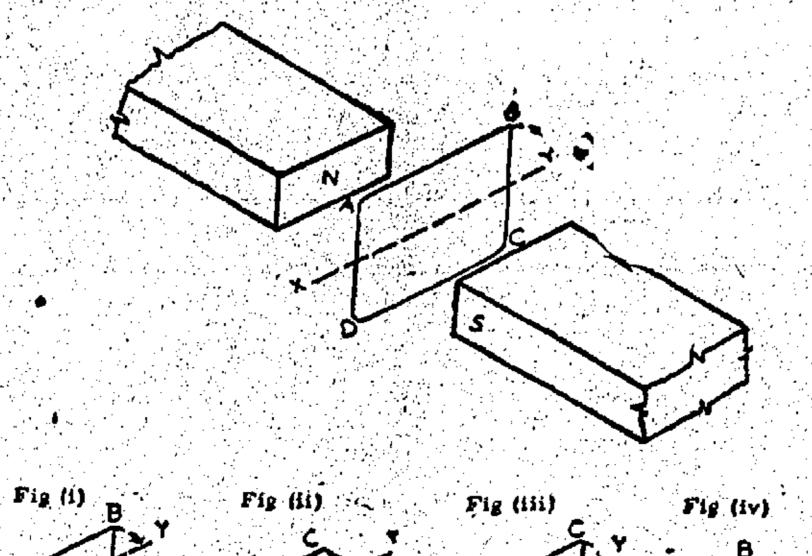

(a) A ray of inonochromatic light is incident on one face of a parallel sided glass block at an angle of incidence of 45°. The refractive index of the glass is 1.5. Find the angle of refraction by means of a graphical construction without reference to mathematical tables.

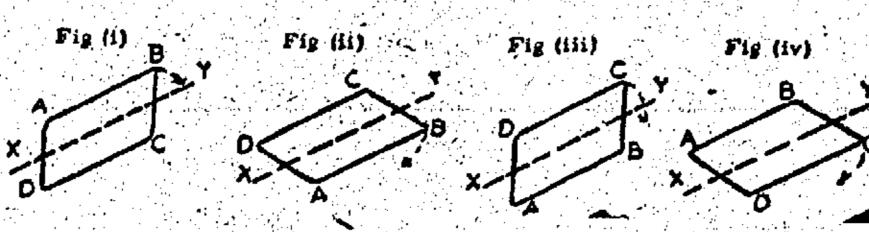

(b) A rectangular block of transparent plastic, whose refractive index is less than that of glass, is now placed the constitution glass block as shown in the figure. Copy the figure; sketch the subsequent track, through both blocks, of the incident ray (angle of incidence # 45°). No graphical construction is required. The angle of emergence from the plastic block is one of the following: (i) greater than, (ii) equal to, (iii) less than, the angle of incidence on the glass block. State which of these is true in your diagram.

- (c) Draw a labelled diagram to show the optical working of a simple form of projection lantern.
- Indicate in your diagram and explain the function of the condensor lone (or lenses).
- (d) The image of a slide 3" × 3" is projected by a lantern on to a screen 10 ft. × 10 ft. placed at a distance of 30 ft. from the lantern. What is the focal longth of the front lens of the lantern if the image just fills the screen?

# SECTION D

- (a) ABCD is a coil of wire which lies so that it can be rotated on axis XY between the North and South poles of a strong magnet.
- Draw (igures (i) to (iv) and on each indicate with arrows the direction of the current flowing through the coil when the coil is moving through the positions shows in these figures.
- (b) With the aid of a labelled diagram, describe the working of a simple form of direct current motor
- (c) Would the motor which you describe act as a generator if the supply of electric current to it were stopped and the armature of the motor were turned mechanically? Give reasons for your answer,

# 英中會考經濟及公共事務科答案(續)

Economic and Public Affairs.

SECTION B

Answer Question 5. 6 and 7 in essay form.

5. (a) What are the main functions of money?

in the complex industrial order it is impossible to carry on trade by means of bater system. It has therefore been found convenient to accept one thing as the standard medium for all exchange transactions. That which is used for this purpose is called money. The universal use of money in commerce aids immensely the processes of exchange. Our manufacturer of cotton yarns, who wants rice, motor cars and pleasure trips, would find it awkward to trade his yarns for those articles, but when he sells his yarns for money, and with the money purchases the things he wants the transaction is casy enough. It is a function of money then, to act as a medium of exchange.

In the process of exchange it is necessary to have some means of comparing values of the goods to be exchanged. Otherwise one would not know how many eggs to exchange for a bag of rice, or how many pairs of shoes for a suit of clothes. When a standard medium of exchange has been adopted by law or general consent, it is possible to express the value of every good in term of it. There then exists a common measure of values by which one good can instantly be compared for purposes of exchange with any other good. When the value of good is thus expressed in terms of money it is called a price. In Hong Kong we have dollar as our monetary unit. Thus we know that if the price of a suit of clothes is fifty dollars and the price of a pair of shoes is ten dollars, the value of the suit is five times that of the shoes; and it will take five pairs of shoes to exchange for one suit of clothes. It is a second function of money, then, to serve as a standard of values.

If you owes someone debt, you can pay that debt by offering money. Then money can be used as a standard for deferred payment.

Finally, when money becomes generally acceptable those who want to provide for their future needs begins to store up money because they can exchange for the thing they might need.

(b) What benifits does a country gain from taking part in international trade?

both parties are benefited.

It is sometimes thought that in an exchange transaction between two countries, one of them must be the gainer and the other a loser. Such is not the case. In a fair exchange

Men live together in cities and towns to earn their living at all kinds of work whilst other men do other kinds we are all more and more dependent on the work of others to give us all we need. To-day raw materials used in factory may come from different parts of the world. The producers have to collect, prepare and pack into bags which are sent to the manufactureer by importers and exporters. Men have had to be paid for producing the goods, for collecting and delivering their and for getting their ready to the factories. The men who transport the raw materials from the producers to the factories by, land rail and road are to be paid.

The raw materials are now ready to make into finished goods. This work has required wages for workers, money to pay for the machines, and for their repair, for electricity, lightning and many other things that make a factory work. When the finished goods have made by the manfacturers, the wholesalers, the transactions are usually passed through the hands of an importer and an exporter. All these consumer's goods, raw materials for

flourishing the development of industries and all forms ! of transport that serve us are the products of international trade.

Commerce is the moving of goods from the man who wants to sell to the man who is willing to buy, the passage of goods from produce through the manufacturers to the consumer may be a long and complicated one. It is, the function of the international trade to provide complex machinery needed for all this.

- (d) Copy out and complete the following sentence: "In the nickel-iron" (Edison) Accumulator Cell. the charged positive plate contains .......... and the negative plate contains ..... and the electrolyte is ...... (s) State one purpose for which nickel-iron accumulators are particularly suited and give two reasons for your answer.
  - (a) Describe, with the aid of a series of simple diagrams, how you would charge a gold leaf electroscope by induction, using a charged ebonite rod. Show on your diagrams the nature of the charge on the rod and the cap and leaf of the electroscope.

(b) An electric kettle is made of copper and weighs 800 gms. It contains, 1-25 litres of water at 16 °C., When current is switched on, the kettle will boil in 42minutes. Neglecting heat losses find the electric power required. (Specific Heat of Copper=0-10. Mechanical Equivalent of Heat=4-2 joules/cal, )

(c) Explain, with the aid of a labelled diagram, how a moving coil loudspeaker works.

(d) If you were provided with a milliammeter of resistance 5 ohms and full scale deflection 10 milliamperes, how would you modify this so that you could use it to measure a potential difference of 20 volts? (Give in full any necessary calculations)

(b) State INO ways in which hydrochloric acid resembles the other common laboratory mineral acids and TWO ways in which it differs from them.  (c) Give FOUR common uses of chiorine.  2. State briefly FOUR general methods for the preparation of salts and illustrate each by an equation in words. Select any TWO of these methods and give complete details for the preparation of a named pure dry sample of the salt	an a said
(b) State Iwo ways in which hydrochloric acid resembles the other common laboratory mineral acids and TWO ways in which it differs from them.  (c) Give FOUR common uses of chiorine.  2- State briefly FOUR general methods for the preparation of salts and illustrate each by an equation in words. Select any TWO of these methods and give complete details for the preparation of a named pure dry sample of the salt by each of these two methods.	an and a second
(b) State Inv ways in which hydrochloric acid resembles the other common laboratory mineral acids and TWO ways in which it differs from them.  (c) Give FOUR common uses of chiorine.  2- State briefly FOUR general methods for the preparation of salts and illustrate each by an equation in words. Select any TWO of these methods and give complete details for the preparation of a named pure dry sample of the salt by each of these two methods.  3- (a) Describe the preparation and collection of nitric acid in the laboratory,	an and a second
(b) State Iwo ways in which hydrochloric acid resembles the other common laboratory mineral acids and TWO ways in which it differs from them.  (c) Give FOUR common uses of chiorine.  2- State briefly FOUR general methods for the preparation of salts and illustrate each by an equation in words. Select any TWO of these methods and give complete details for the preparation of a named pure dry sample of the salt by each of these two methods.	an a second
(b) State INO ways in which hydrochloric acid resembles the other common laboratory mineral acids and TWO ways in which it differs from them.  (c) Give FOUR common uses of chiorine.  2. State briefly FOUR general methods for the preparation of salts and illustrate each by an equation in words. Select any TWO of these methods and give complete details for the preparation of a named pure dry sample of the salt by each of these two methods.  3. (a) Describe the preparation and collection of nitric acid in the laboratory.  (b) Outque and commercial preparation of nitric acid from Ammonia.	an a second
(b) State Two ways in which hydrochloric acid resembles the other common Taboratory mineral acids and TWO ways in which it differs from them.  (c) Give FOUR common uses of chiorine.  2. State briefly FOUR general methods for the preparation of salts and illustrate each by an equation in words. Select any TWO of these methods and give complete details for the preparation of a named pure dry sample of the salt by each of these two methods.  3. (a) Describe the preparation and collection of nitric acid in the laboratory,  (b) Outque the commercial preparation of nitric acid from Ammonia.  Section II (Physics)  4. (a) Describe a simple experiment to find the average horse-power exerted.	an and a second
(b) State INO ways in which hydrochloric acid resembles the other common Taboratory mineral acids and TWO ways in which it differs from them.  (c) Give FOUR common uses of chiorine.  State briefly FOUR general methods for the preparation of salts and illustrate each by an equation in words. Select any TWO of these methods and give complete details for the preparation of a named pure dry sample of the salt by each of these two methods.  (a) Describe the preparation and collection of nitric acid in the laboratory,  (b) Outque une commercial preparation of nitric acid from Ammonia.  Section II (Physics)  (a) Define the terms (i) a Force, (ii) Work.  (b) Describe a simple experiment to find the average horse-power exerted by a man climbing an inclined ladder.  (c) A man uses a long rope and a system of pulleys to raise a load of 880 th	
(b) State Iwo ways in which hydrochloric acid resembles the other common Taboratory mineral acids and TWO ways in which it differs from them.  (c) Give FOUR common uses of chiorine.  2. State briefly FOUR general methods for the preparation of salts and illustrate each by an equation in words. Select any TWO of these methods and give complete details for the preparation of a named pure dry sample of the salt by each of these two methods.  3. (a) Describe the preparation and collection of nitric acid in the laboratory,  (b) Outque was commercial preparation of nitric acid from Ammonia.  Section II (Physics)  4. (a) Define the terms (i) a Force, (ii) Work.  1. (b) Describe a simple experiment to find the average horse-power exerted by a man climbing an inclined ladder.	
(b) State Two ways in which hydrochloric acid resembles the other common Taboratory mineral acids and TWO ways in which it differs from them.  (c) Cive FOUR common uses of chiorine.  2. State briefly FOUR general methods for the preparation of salts and illustrate each by an equation in words. Select any TWO of these methods and give complete details for the preparation of a named pure dry sample of the salt by each of these two methods.  3. (a) Describe the preparation and collection of nitric acid in the laboratory,  (b) Outque the commercial preparation of nitric acid from Ammonia.  Section II (Physics)  4. (a) Define the terms (i) a Force, (ii) Work.  (b) Describe a simple experiment to find the average horse-power exerted by a man climbing an inclined ladder.  (c) A man uses a long rope and a system of pulleys to raise a load of 880 th vertically through 8 ft. He exerts a steady effort of 110 lbs. wt. while	
(b) State INO ways in which hydrochloric acid resembles the other commit.  Taboratory mineral acids and TWO ways in which it differs from them.  (c) Give FOUR common uses of chiorine.  State briefly FOUR general methods for the preparation of salts and illustrate each by an equation in words. Select any TWO of these methods and give complete details for the preparation of a named pure dry sample of the salt by each of these two methods.  1. (a) Describe the preparation and collection of nitric acid in the laboratory,  (b) Outque use commercial preparation of nitric acid from Ammonia.  Section II (Physics)  (a) Define the terms (i) a Force, (ii) Work.  (b) Describe a simple experiment to find the average horse-power exerted by a man climbing an inclined ladder.  (c) A man uses a long rope and a system of pulleys to raise a load of 880 th vertically through 8 ft. He exerts a steady effort of 110 lbs. vt. while pulling 80 ft. of the hauling rope through his hands in two minutes.  (a) the Velocity Ratio of the pulley system.	
(b) State Two ways in which hydrochloric acid resembles the other committed and the committed acids in which it differs from them.  (c) Give FOUR common uses of chiorine.  2. State briefly FOUR general methods for the preparation of salts and illustrate such by an equation in words. Select any the complete details for the preparation of a named pure dry sample of the salt by each of these two methods.  3. (a) Describe the preparation and collection of nitric acid in the laboratory,  (b) Outque the commercial preparation of nitric acid from Ammonia.  Section II (Physics)  4. (a) Define the terms (i) a Force, (ii) Work.  (b) Describe a simple experiment to find the average horse-power exerted by a man climbing an inclined ladder.  (c) A man uses a long rope and a system of pulleys to raise a load of 880 th vertically through 8 ft. He exerts a steady effort of 110 lbs. wt. while pulling 80 ft. of the hauling rope through his hands in two minutes.  (ii) the Velocity Ratio of the pulley system.  (iii) the efficiency of the system.	
(b) State Two ways in which hydrochloric acid resembles the other common Taboratory mineral acids and TWO ways in which it differs from them.  (c) Cive FOUR common uses of chiorine.  2. State briefly FOUR general methods for the preparation of salts and illustrate each by an equation in words. Select any TWO of these methods and give complete details for the preparation of a named pure dry sample of the salt by each of these two methods.  3. (a) Describe the preparation and collection of nitric acid in the laboratory,  (b) Outque use commercial preparation of nitric acid from Ammonia.  Section II (Physics)  4. (a) Describe a simple experiment to find the average horse-power exerted by a man climbing an inclined ladder.  (c) A man uses a long rope and a system of pulleys to raise a load of 880 th vertically through 8 ft. He exerts a steady effort of 110 lbs. wt. while pulling 80 ft. of the hauling rope through his hands in two minutes.  (ii) the Velocity Ratio of the pulley system.  (iii) the horse-power at which the man works.  (d) How would you find by experiment the position of the centre of gravity)	
(b) State INO ways in which hydrochloric acid resembles the other commit.  Taboratory mineral scids and TWO ways in which it differs from them.  (c) Give FOUR common uses of entorine.  State briefly FOUR general methods for the preparation of salts and illustrate each by an equation in words. Select any TWO of these methods and give complete details for the preparation of a named pure dry sample of the salt by each of these two methods.  (a) Describe the preparation and collection of nitric acid in the laboratory,  (b) Outnine was commercial preparation of nitric acid from Ammonia.  Section II (Physics)  (a) Describe a simple experiment to find the average horse-power exerted by a man climbing an inclined ladder.  (c) A man uses a long rope and a system of pulleys to raise a load of 880 th vertically through 8 ft. He exerts a steady effort of 110 lbs. wt. while pulling 80 ft. of the hauling rope through his hands in two minutes.  (a) the Velocity Ratio of the pulley system.  (ii) the efficiency of the system.  (iii) the horse-power at which the man works.	
(b) State TWO ways in which hydrochloric acid resembles the other commit.  Taboratory mineral acids and TWO ways in which it differs from them.  (c) Cive FOUR common uses of chiorine.  State briefly FOUR general methods for the preparation of salts and illustrate each by an equation in words. Select any TWO of these methods and give complete details for the preparation of a named pure dry sample of the salt by each of these two methods.  Last Describe the preparation and collection of nitric acid in the laboratory,  (b) Outness as commercial preparation of nitric acid from Ammonia.  Section II (Physics)  (a) Describe a simple experiment to find the average horse-power exerted by a man climbing an inclined ladder.  (c) A man uses a long rope and a system of pulleys to raise a load of 850 th vertically through 8 ft. He exerts a steady effort of 110 lbs. wt. while pulling 80 ft. of the hauling rope through his hands in two minutes.  (a) the Velocity Ratio of the pulley system.  (ii) the efficiency of the system.  (iii) the horse-power at which the man works.  (d) How would you find by experiment the position of the centre of gravity of an irregular shaped sheet of cardboard?	
(b) State TWO ways in which hydrochloric acid resembles the other commit.  Taboratory mineral acids and TWO ways in which it differs from them.  (c) Cive FOUR common uses of chiorine.  State briefly FOUR general methods for the preparation of salts and illustrate each by an equation in words. Select any TWO of these methods and give complete details for the preparation of a named pure dry sample of the salt by each of these two methods.  Last Describe the preparation and collection of nitric acid in the laboratory,  (b) Outness as commercial preparation of nitric acid from Ammonia.  Section II (Physics)  (a) Describe a simple experiment to find the average horse-power exerted by a man climbing an inclined ladder.  (c) A man uses a long rope and a system of pulleys to raise a load of 850 th vertically through 8 ft. He exerts a steady effort of 110 lbs. wt. while pulling 80 ft. of the hauling rope through his hands in two minutes.  (a) the Velocity Ratio of the pulley system.  (ii) the efficiency of the system.  (iii) the horse-power at which the man works.  (d) How would you find by experiment the position of the centre of gravity of an irregular shaped sheet of cardboard?	
(b) State INO ways in which hydrochloric acid resembles the other commitatories in the sale of chiorine.  (c) Give FOUR common uses of chiorine.  2. State briefly FOUR general methods for the preparation of salts and illustrate such by an equation in words. Select any TWO of these methods and give complete details for the preparation of a named pure dry sample of the salt by each of these two methods.  3. (a) Describe the preparation and collection of nitric acid in the laboratory,  (b) Outque was commercial preparation of nitric acid from Ammonia.  Section II (Physics)  4. (a) Describe a simple experiment to find the average horse-power exerted by a man climbing an inclined ladder.  (c) A man uses a long rope and a system of pulleys to raise a load of 880 th vertically through 8 ft. He exerts a steady effort of 110 lbs. wt. while pulling 80 ft. of the hauling rope through his hands in two minutes.  (ii) the Velocity Ratio of the pulley system.  (iii) the horse-power at which the man works.  (d) How would you find by experiment the position of the centre of gravity of an irregular shaped sheet of cardboard?  How would you check that the position obtained was correct?	
(b) State INO ways in which hydrochloric acid resembles the other commit Taboratory mineral acids and TWO ways in which it differs from them,  (c) Cive FOUR common uses of chiorine.  2. State briefly FOUR general methods for the preparation of salts and illustrate such by an equation in words. Select any TWO of these methods and give complete details for the preparation of a named pure dry sample of the salt by each of these two methods.  3. (a) Describe the preparation and collection of nitric acid in the laboratory,  (b) Outque us commercial preparation of nitric acid from Ammonia.  Section II (Physics)  4. (a) Define the terms (i) a Force, (ii) Work,  (b) Describe a simple experiment to find the average horse-power exerted by a man climbing an inclined ladder.  (c) A man uses a long rope and a system of pulleys to raise a load of 880 th vertically through 8 ft. He exerts a steady effort of 110 lbs. wt. while pulling 80 ft. of the hauling rope through his hands in two minutes.  (ii) the Velocity Ratio of the pulley system.  (iii) the efficiency of the system.  (iii) the horse-power at which the man works.  (d) How would you find by experiment the position of the centre of gravity of an irregular shaped sheet of cardboard?  How would you check that the position obtained was correct?	
(b) State Two ways in which hydrochloric acid resembles the other commitational acids and TWO ways in which it differs from them.  (c) Give FOUR common uses of chiorine.  2. State briefly FOUR general methods for the preparation of salts and illustrate each by an equation in words. Select any TWO of these methods and give complete details for the preparation of a named pure dry sample of the salt by each of these two methods.  2. [a] Describe the preparation and collection of nitric acid in the laboratory,  (b) Outque ma commission preparation of nitric acid from Ammonia.  Section II (Physics)  4. (a) Define the terms (i) a Force, (ii) Work.  (b) Describe a simple experiment to find the average horse-power exerted by a man climbing an inclined ladder.  (c) A man uses a long rope and a system of pulleys to raise a load of 880 th vertically through 8 ft. He exerts a steady effort of 110 lbs., wt., while pulling 80 ft. of the hauling rope through his hands in two minutes.  (d) the Velocity Ratio of the pulley system.  (ii) the efficiency of the system.  (iii) the horse-power at which the man works.  (d) How would you find by experiment the position of the centre of gravity of an irregular shaped sheet of cardboard?  How would you check that the position obtained was correct?  1. (a) Draw a labelled diagram to show the construction of a charged simple thead accumulator.  (b) Give TWO tests by which you could tell that such an accumulator is fully	
(b) State Two ways in which nydrochloric acid resembles the other commitationary mineral acids and TWO ways in which it differs from them,  (c) Cive FOUR common uses of chiorine.  2. State beiefly FOUR general methods for the preparation of salts and illustrate such by an equation in words. Select any TWO of these methods and give complete details for the preparation of a named pure dry sample of the salt by each of these two methods.  3. (a) Describe the preparation and collection of nitric acid in the laboratory,  (b) Outnes ms. commercial preparation of nitric acid from Ammonia.  Section II (Physics)  4. (a) Define the terms (i) a Force, (ii) Work.  (b) Describe a simple experiment to find the average horse-power exerted by a man blimbing an inclined ladder.  (c) A man uses a long rope and a system of pulleys to raise a load of 880 th vertically through 5 ft. He exerts a steady effort of 110 lbs. wt. while pulling 80 ft. of the hauling rope through his hands in two minutes.  (casculate showing workings.  (ii) the Velocity Ratio of the pulley system.  (iii) the efficiency of the system.  (iii) the horse-power at which the man works.  (d) How would you find by experiment the position of the centre of gravity of an irregular shaped sheet of cardboard?  How would you check that the position obtained was correct?  (a) Draw a labelled diagram to show the construction of a charged simple tead accumulator.  (b) Give TWO tests by which you could tell that such an accumulator is fully charged.	
(c) State Two ways in which nydrochloric acid resembles the other commit Taboratory mineral acids and TWO ways in which it differs from them.  (c) Give FOUR common uses of calorine.  2. State briefly FOUR general methods for the preparation of salts and illustrate each by an equation in words. Select any TWO of these methods and give complete details for the preparation of a named pure dry sample of the salt by each of these two methods.  2. (a) Describe the preparation and collection of nitric acid in the laboratory,  (b) Outque ma commercial preparation of nitric acid from Ammonia.  Section II (Physics)  4. (a) Define the terms (i) a Force, (ii) Work.  1. (b) Describe a simple experiment to find the average horse-power exerted by a man climbing an inclined ladder.  (c) A man uses a long rope and a system of pulleys to raise a load of 850 th vertically through 8 ft. He exerts a steady effort of 110 lbs. wt. while pulling 30 ft. of the hauling rope through his hands in two minutes.  (d) the Velocity Ratio of the pulley system.  (iii) the horse-power at which the man works.  (d) How would you find by experiment the position of the centre of gravity of an irregular shaped sheet of cardboard?  How would you check that the position obtained was correct?  (a) Draw a labelled diagram to show the construction of a charged simple lead accumulator.  (b) Give TWO tests by which you could tell that such an accumulator is fully charged.  (c) Describe in detail with the aid of a labelled circuit diagram how you would charge a 12 volt accumulator using current supplied by either, the Hons Kons Electric Co. or the China Light and Power Co.	
(b) State xwv ways in which hydrochloric acid resembles the other commitatoratory mineral acids and TWO ways in which it differs from them.  (c) Cive FOUR common uses of chievance.  State briefly FOUR general methods for the preparation of salts and illustrate each by an equation in words. Select any TWO of these methods and give complete details for the preparation of a named pure dry sample of the salt by each of these two methods.  (a) Describe the preparation and collection of nitric acid in the laboratory.  (b) Outque the commercial preparation of nitric acid from Ammonia.  Section II (Physics)  (c) A man uses a long rope and a system of pulleys to raise a load of 850 the vertically through 8 ft. He exerts a steady effort of 110 lbs. wt. while pulling 80 ft. of the hauling rope through his hands in two minutes.  (c) A man uses a long rope and a system of pulleys to raise a load of 850 the vertically through 8 ft. He exerts a steady effort of 110 lbs. wt. while pulling 80 ft. of the hauling rope through his hands in two minutes.  (d) the Velocity Ratio of the pulley system.  (ii) the efficiency of the system.  (iii) the horse-power at which the man works.  (d) How would you find by experiment the position of the centre of gravity of an irregular shaped sheet of cardboard?  How would you check that the position obtained was correct?  (b) Give TWO tests by which you could tell that such an accumulator is fully charged.  (c) Describe in detail with the aid of a labelled circuit diagram how you would charge a 12 volt accumulator using current supplied by either, the Wond Kons Electric Co. or the China Lisht and Power Co.  (d) Give FVE important points in the maintenance of an accumulator.]	
(b) State xwo ways in which hydrochloric acid resembles the other commitatoratory mineral acids and TWO ways in which it differs from them.  (c) Cive FOUR common uses of chiorine.  2. State briefly FOUR general methods for the preparation of salts and illustrate such by an equation in words. Select any TWO of these methods and give complete details for the preparation of a named pure dry sample of the salt by each of these two methods.  3. (a) Describe the preparation and collection of nitric acid in the laboratory,  (b) Outune me commercial preparation of nitric acid from Ammonia.  Saction II (Physics)  4. (a) Describe a simple experiment to find the average horse-power sacrted by a man kilmbing an inclined ladder.  (c) A man uses a long rope and a system of pulleys to value a load of 850 th vertically through 8 ft. He exerts a steady effort of 110 lbs. wi. whils pulling 80 ft. of the hauling rope through his hands in two minutes.  (d) the Velocity Ratio of the pulley system.  (ii) the efficiency of the system.  (iii) the horse-power at which the man works.  (d) How would you find by experiment the position of the centre of gravity) of an irregular shaped sheet of cardboard?  How would you check that the position obtained was correct?  4. (a) Draw a labelled diagram to show the construction of a charged simple that dead accumulator.  (b) Give TWO tests by which you could tell that such an accumulator is fully charged.  (c) Describe in detail with the aid of a labelled circuit diagram how you would charge a 12 volt accumulator using current supplied by either the Hong Kong Electric Co. or the China Light and Power Co.  (d) Give FIVE important points in the maintenance of an accumulator.]  6. Explain, clearly, stating the scientific principles involved:	
(b) State xwo ways in which hydrochloric acid resembles the other commitatoratory mineral acids and TWO ways in which it differs from them.  (c) Give FOUR common uses of chiorine.  2. State briefly FOUR general methods for the preparation of salts and illustrate such by an equation in words. Select any TWO of these methods and give complete details for the preparation of a named pure dry sample of the salts by each of these two methods.  3. [a] Describe the preparation and collection of nitric acid in the laboratory,  (b) Outune me commercial preparation of nitric acid from Ammonia.  Section II (Physics)  4. [a] Describe a simple experiment to find the average horse-power sacrted by a man climbing an inclined ladder.  (c) A man uses a long rope and a system of pulleys to raise a load of 850 the vertically through 8 ft. He exerts a steady effort of 110 lbs. wi. while pulling 80 ft. of the hauling rope through his hands in two minutes.  (d) the Velocity Ratio of the pulley system.  (ii) the horse-power at which the man works.  (d) How would you find by experiment the position of the centre of gravity of an irregular shaped sheet of cardboard?  How would you check that the position obtained was correct?  1. (a) Draw 2 labelled diagram to show the construction of a charged simple band accumulator.  (b) Give TWO tests by which you could tell that such an accumulator is fully charged.  (c) Describe in detail with the said of a labelled circuit diagram how you would charge a 12 volt accumulator using current supplied by either, the Mona Kons Electric Co. or the China Lisht and Power Co.  (d) Give FIVE important points in the maintenance of an accumulator.]  6. Explain, clearly, stating the scientific principles involved:  (a) A piece of paper can be set on tire by using a suitaoic tens as a burning	
(a) State xwo ways in which hydrochloric acid resembles the other committationalory mineral acids and TWO ways in which it differs from them.  (c) Give FOUR common uses of enterine.  2. State befelly FOUR general methods for the preparation of salts and illustrate each by an equation in words. Select any TWO of these methods and give complete details for the preparation of a named pure dry sample of the salt by each of these two methods.  3. (a) Describe the preparation and collection of nitric acid in the laboratory,  (b) Outune ma commercial preparation of nitric acid from Ammonia.  Section II (Physics)  4. (a) Describe a simple experiment to find the average horse-power exerted by a man climbing an inclined ladder.  (c) A man uses a long rope and a system of pulleys to raise a load of 880 th vertically through 8 ft. He exerts a steady effort of 110 lbs. wi. while pulling 80 ft. of the hauling rope through his hands in two minutes.  (d) the Velocity Ratio of the pulley system.  (ii) the horse-power at which the man works.  (d) How would you find by experiment the position of the centre of gravity of an irregular shaped sheet of cardboard?  How would you check that the position obtained was correct?  (a) Draw a labelled diagram to show the construction of a charged simple lead accumulator.  (b) Give TWO tests by which you could tell that such an accumulator is fully charged;  (c) Describe in detail with the aid of a labelled circuit diagram how you would charge a 12 volt accumulator using current supplied by either the Hone Kong Electric Ca. or, the China Lisht and Power Co.  (d) Give FIVE important points in the maintenance of an accumulator.]  5. Explain, clearly, stating the scientific principles involved:  (a) A piece of paper can be set on tire by using a suitable lens as a burning glass.	
(b) State 1 we ways in which hydrochloric acid resembles the other commit Taboratory mineral acids and TWO ways in which it differs from them.  (c) Give FOUR common uses of culorine.  2. State briefly FOUR general methods for the preparation of galts and illustrate each by an equation in words. Select any TWO of these methods and give complete details for the preparation of a named pure dry sample of the salt by each of these two methods.  2. (a) Describe the preparation and collection of nitric acid in the laboratory,  (b) Outque was commercial preparation of altric acid from Ammonia.  Section II (Physics)  4. (a) Describe a simple experiment to find the average horse-power exerted by a man tilimbing an declined ladder.  (c) A man uses a long tope and a system of pulleys to raise a load of 850 th vertically through 8 ft. He exerts a stendy effort of 110 lbs. wi. while pulling 80 ft. of the hauling rope through his hands in two minutes.  (d) the Velocity Ratio of the pulley system.  (ii) the efficiency of the system.  (iii) the horse-power at which the man works.  (d) How would you find by experiment the position of the centre of gravity of an irregular shaped sheet of cardboard?  How would you check that the position obtained was correct?  1. (a) Draw a labelled diagram to show the construction of a charged simple thead accumulator.  (b) Give TWO tests by which you could tell that such an accumulator is fully charged.  (c) Describe in detail with the aid of a labelled circuit diagram how you would charge a 12 volt accumulator using current supplied by either, the Wond Kons Electric Ca. or the China Light and Power Ca.  (d) Cive TWO tests by which you could tell that and Power Ca.  (d) Cive Five important points in the maintenance of an accumulator. J.  (e) Explain, clearly, stating the scientific principles involved:  (a) A piece of paper can be set on tire by using a suitance tens as a burning glass.  (b) The wire filament of a gas-filled electric bulb is (i) thin (ii) tightly coile.	
(c) State Two ways in which nydrochloric acid resembles the other commitatoratory mineral acids and TWO ways in which it differs from them.  (c) Give FOUR common uses of catorine.  2. State briefly FOUR general methods for the preparation of salts and illustrate each by an equation in words. Select any TWO of these methods and give complete details for the preparation of a named pure dry sample of the salt by each of these two methods.  (a) Describe the preparation and collection of nitric acid in the laboratory.  (b) Outque was commercial preparation at nitric acid from Ammonia.  Section II (Physics)  (a) Describe a simple experiment to find the average horse-power exerted by a man climbing and clined ladder.  (b) Describe a simple experiment to find the average horse-power exerted by a man climbing and clined ladder.  (c) A man uses a long tops and a system of pulleys to raise a load of 880 the vertically through 8 ft. He exerts a steady effort of 110 lbs. wr. while pulling 80 ft. of the hauling rope through his hands in two minutes.  (d) The Velocity Ratio of the pulley system.  (ii) The velocity Ratio of the pulley system.  (iii) The horse-power at which the man works.  (d) How would you find by experiment the position of the centre of gravity of an irregular shaped sheet of cardboard?  How would you check that the position obtained was correct?  (a) Describe in detail with the aid of a labelled circuit diagram how you would charge a 12 voil accumulator using current supplied by either the Hone Kons Electric Co. or, the China Light and Power Co.  (d) Give FIVE imnortant points in the maintenance of an accumulator.]  (d) Give Five imnortant points in the maintenance of an accumulator.  (a) A piece of paper can be set on fire by using a suitable lens as a burning glass.  (b) The wire fliament of a gas-filled electric bulb is (i) thin (ii) tightly colled of water below the hull of a ship.	
(b) State xyw ways in which nydrochloric acid resembles the other commitationary mineral acids and TWO ways in which it differs from them.  (c) Give FOUR common uses of catorine.  2. State briefly FOUR general methods for the preparation of salts and illustrates the by an equation in words. Select any TWO of these methods and give complete details for the preparation of a named pure dry sample of the salt by each of these two methods.  3. (a) Describe the preparation and collection of nitric acid in the laboratory.  (b) Outque me commercial preparation of nitric acid from Ammonia.  Section II (Physics)  4. (a) Describe a simple experiment to find the average horse-power exerted by a man klimbing an inclined ladder.  (c) A man uses a long rope and a system of pulleys to raise a load of 880 th vertically through 6ft. He exerts a steady effort of 110 lbs. wt. while pulling 80 ft. of the hauling rope through his hands in two minutes.  (d) the Velocity Ratio of the system.  (ii) the Velocity Ratio of the system.  (iii) the horse-power at which the man works.  (d) How would you find by experiment the position of the centre of gravity of an irregular shaped sheet of cardboard?  How would you check that the position obtained was correct?  1. (a) Draw 3 labelled diagram to show the construction of a charged simple thead accumulator.  (b) Give TWO tests by which you sould tell that such an accumulator is fully charged.  (c) Describe in detail with the aid of a labelled circuit diagram how you would charge a 12 volt accumulator using current supplied by either, the would charge a 12 volt accumulator using current supplied by either, the would charge a 12 volt accumulator using current supplied by either, the would charge a 12 volt accumulator using current supplied by either, the would charge a 12 volt accumulator using current supplied by either, the would charge a 12 volt accumulator using current supplied by either, the would charge a 12 volt accumulator using current supplied by either, the would charge a 12 volt accu	
(b) State xyw ways in which nydrochloric acid resembles the other commitaboratory mineral acids and TWO ways in which it differs from them.  (c) Give FOUR common uses of catorine.  2. State briefly FOUR general methods for the preparation of salts and illustrate such by an equation in words. Select any TWO of these methods and give complete dentile for the preparation of a named pure dry sample of the salt by each of these two methods.  2. (a) Describe the preparation and collection of nitric acid from Ammonia.  5. (b) Outque was commercial preparation of nitric acid from Ammonia.  5. (c) Describe a simple experiment to find the average horse-power exerted by a man climbing an declined ladder.  (d) A man uses a long rope and a system of pulleys to raise a load of 880 th vertically through 6 ft. He exerts a steady effort of 110 lbs. ww. while pulling 80 ft. of the hauling rope through his hands in two minutes.  (d) the Velocity Ratio of the pulley system.  (ii) the vertically through 6 ft. He exerts a steady effort of 110 lbs. ww. while pulling 80 ft. of the hauling rope through his hands in two minutes.  (d) the Velocity Ratio of the system.  (iii) the officiency of the system.  (iii) the horse-power at which the man works.  (d) How would you find by experiment the position of the centre of gravity of an irregular shaped sheet of cardboard?  How would you check that the position obtained was correct?  1. (a) Draw 3 labelled diagram to show the construction of a charged simple thead accumulator.  (b) Give TWO tests by which you could tell that such an accumulator is fully charged.  (c) Describe in detail with the aid of a labelled circuit diagram how you would charge a 12 volt accumulator using current supplied by either the Hone Kons Electric Co. or, the China Light and Power Co.  (d) Give FIVE important points in the maintenance of an accumulator.]  6. Explain, clearly, stating the scientific principles involved:  (a) A piece of paper can be set on tire by using a autaote lens as a burning glass.  (b) The wire	
(b) State xyw ways in which hydrochloric acid resembles the other commitaboratory mineral acids and TWO ways in which it differs from them.  (c) Give FOUR common uses of catorine.  2. State bridly FOUR general methods for the preparation of salts and illustrate sech by an equation in words. Salect any TWO of these methods and give complete details for the preparation of a named pure dry sample of the salt by each of these two methods.  3. (a) Describe the preparation and collection of nitric acid in the laboratory.  (b) Outnie the commercial preparation and collection of nitric acid in the laboratory.  (c) Outnie the commercial preparation and collection of nitric acid from Ammonia.  Section II (Physics)  4. (a) Define the terms (i) a Force. (ii) Work.  (b) Describe a simple experiment to find the average horse-power exerted by a man elimbing an duclined ladder.  (c) A man uses a long rope and a system of pulleys to raise a load of 850 in vertically through fit. He exercis a steady effort of 110 lbs. wit, while pulling 80 fft. of the halling rope through his hands in two minutes.  (c) the Velocity Ratio of the system.  (di) the Velocity Ratio of the pulley system.  (di) the horse-power at which the man works.  (d) How would you find by experiment the position of the centre of gravity, of an irregular shaped sheet of cardboard?  How would you check that the position obtained was correct?  (a) Draw a labelled diagram to show the construction of a charged simple that get a labelled diagram how you would charge a 12 volt accumulator using current supplied by either the Home Kone Electric Co. or, the China Light and Power Co.  (d) Cive TWO tests by which you could tell that such an accumulator.]  (e) A piece of paper can be set on tire by using a suitable lens as a burning glass.  (b) The wire filament of a gas-filled electric bulb is (f) thin (ii) rightly collection. A knowledge of the velocity of sound in water can be used to find the dep of water below the hull of a ship.  (d) A car engine will 'acite—up' if it r	

(b) What experiments world you perform to sino out the conditions necessary for its germination?

9. How would you show that light, chlorophyll and carbon dioxide are necessary for photosynthesis?

製法

板搽油,將小餅置上,用焗火三百五十度,焗十五分鐘,攪勻,做成約一吋半之小波,搽扁,加一粒杏仁在中心(11)麵粉,玉桂丁香及梳打粉頭節勻加入法:

村村・ (一)牛油六安士(二)幼黄砂糖一杯(三)村村・ (一)牛油六安士(二)幼黄砂糖一杯(三)村村・ (一)牛油六安士(二)幼黄砂糖一杯(三)
